

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at http://books.google.com/

Strawe La.

INTRODUCTION.

En 1873 M. O. Struve, alors Président de l'Astronomische Gesellschaft, me proposa de prendre part au travail entrepris par la dite société et, au moyen du cercle méridien de l'observatoire de Nicolajew, de déterminer, conformément au plan accepté, les positions des étoiles de la Bonner Durchmusterung entre les limites -2° à +1°. J'acceptai avec empressement cette proposition, mais je ne pus me mettre au travail qu'après un temps considérable.

En ce temps-là l'observatoire, entretenu aux frais du Ministère de la Marine, se trouvait en reconstruction. Grâce à la protection éclairée de feu le Général-Amiral Grand Duc Constantin Nicolajewitch, le Trésor avait deboursé les sommes nécessaires pour l'acquisition de nouveaux instruments, la réparation des anciens, et la restauration du bâtiment de l'observatoire, la construction de tours mobiles, etc. Le cercle méridien exigeait aussi plusieurs changements et réparations: il était nécessaire de remplacer les verniers par des microscopes, d'ajuster les collimateurs qui lui manquaient jusqu'alors, etc.; d'ailleurs, il fallait refaire les trappes du toit qui étaient trop vieilles et faisaient eau; il était indispensable de procurer une pendule avec l'interrupteur et l'appareil enregistreur, etc. C'est pourquoi ce n'a été qu'en 1876 qu'il me devint possible de commencer les observations.

Quelque temps après le commencement du travail, je m'aperçus que les étoiles plus faibles que 9^m ne pouvaient être observées que dans les circonstances les plus favorables; cela dependait moins de la faible puissance de la lunette (108 mm) que de la construction vicieuse de la salle d'observation, qui a des murs maçonnés, épais de 5 pieds, le plafond voûté également en pierre, et la coupe méridienne seulement de 2 pieds de largeur! Par suite on n'a d'images tranquilles que par les beaux temps de longue durée, lorsque les trappes et les volets peuvent rester ouverts pendant plusieurs jours; sinon les images deviennent ordinairement si ondulantes et diffuses que les étoiles faibles disparaissent presque. Heureusement, les étoiles plus faibles que 9^m, qui devaient être observées selon le programme, ne sont pas nombreuses.

En 1884 M. le Professeur Schönfeld compléta mon catalogue préliminaire en me faisant parvenir la liste de 354 étoiles, tirée du manuscrit de sa »Südliche Durchmusterung«, jusqu'à —2°10′ (Éq. 1855) qui devaient être observées pour assurer le rattachement à la zone méridionale voisine. En tout, le catalogue préliminaire contenait 5920 étoiles.

Le catalogue qui suit est composé de 5954 numéros. Retranchant de ce nombre 14 pour les étoiles du Catalogue fondamental, on a un total de 5940 différentes étoiles, dont les positions ont été déterminées pour le catalogue de Nicolajew. Six des objets du catalogue préliminaire se sont trouvés composés par deux étoiles, et dix-neuf étoiles n'appartenant pas à B.D. ont été occasionnellement observées. Trois étoiles cependant, faisant partie du programme, ont échappé à l'observation: -1° 1146 9° 5, $+0^{\circ}$ 1289 9° 1, et -0° 412, objet pour lequel la grandeur 8.7 est inscrite dans B.D. mais qui en réalité est la nébuleuse h 262. Une quatrième étoile, -1° 966 9° 0, a été bien remarquée, mais n'a pas été séparément observée à côté de l'étoile Nr. 1406 avec laquelle elle compose l'étoile double Σ 751 de 15 seulement de distance. Une cinquième étoile, -0° 1080 9° 0, a manqué à ma liste par suite d'une double méprise dans l'indication de la grandeur, Obs. de Bonn vol. III et VII; enfin, une sixième, -0° 615 8° 8, manque au catalogue laquelle, bien que cherchée à plusieurs reprises, ne s'est pas trouvée au ciel.

J'ai dit plus haut que les observations ont été commencées en 1876, mais j'étais contraint de les interrompre souvent, et quelquesois pour longtemps. Je crois nécessaire d'ajouter que jusqu'en 1886 je n'avais

pas d'adjoint, et que je devais m'occuper de tous les travaux de l'observatoire, tant de ceux purement scientifiques que de tous autres qu'exigeaient les besoins de la Marine; en outre je m'occupais souvent de l'instruction des officiers de la Marine en vue de leurs travaux pratiques d'astronomie et de géodésie; enfin pendant plusieurs années je pris part à la détermination de différents points astronomiques au Sud de la Russie, aux observations et aux calculs.

D'un autre coté les défauts déjà mentionnés de la salle d'observation retardaient beaucoup le travail: la région de la zone la plus riche en étoiles culmine de nuit pendant les mois d'hiver, où le beau temps n'est pas fréquent à Nicolajew; il y avait des années où aux mois de Novembre et de Décembre le ciel restait couvert pendant deux, trois semaines; le beau temps revenant enfin entraînait toujours un fort abaissement du thermomètre et par suite des images inquiètes, et parfois il fallait attendre 24 heures pour que la température intérieure s'égalât avec celle du dehors et que les courants d'air à travers les trappes cessassent. A cause de tout cela la liste des observations proposées n'a été épuisée qu'en 1892; les calculs des observations achevés, il s'est montré nécessaire de faire une série d'observations complémentaires qui ont été obtenues en 1896—1899. Enfin il faut ajouter qu'il existait encore une cause essentielle de retard dans ce travail, c'est que toutes les observations, les lectures, l'enregistrement etc. et tous les calculs, je les ai faits sans aucun aide. —

Le cercle méridien de l'Observatoire fut construit par Reichenbach vers 1825, et, d'après la description de W. Struve dans les »Observationes astronomicae, institutae in specula Universitatis Dorpatensis«, Vol. IV, il est semblable à celui de Dorpat. L'ouverture de l'objectif = 48 lignes par. = 108^{mm}, la distance focale = 65 pouces anglais, la longueur de l'axe horizontal = 33 pouces, le diamètre du cercle aux divisions = 37 pouces; le cercle gradué de 3' à 3'; le grossissement employé ordinairement = 170. Au lieu des verniers j'ai fixé au bord du cercle de l'alidade quatre microscopes de Repsold; trois révolutions de leurs micromètres correspondent à un intervalle du limbe; 1 division du tambour à 1". L'erreur de collimation se détermine à l'aide de deux instruments de passage transportables qui se placent sur des planches métalliques, fixées au moyen de charnières aux murs dans la coupe méridienne. Le cube central de la lunette méridienne n'est pas percé, la ligne des collimateurs passe, pour cette raison, au-dessous de l'axe de l'instrument et l'inclinaison de la lunette dirigée sur l'un des collimateurs est = 2°22'.

Avant le commencement des observations de la zone l'azimut et l'inclinaison de l'instrument furent réglés à l'aide du niveau et des observations de la polaire, après quoi pendant toute la durée de ce travail la position de la lunette n'a été corrigée que deux ou trois fois: les fondements des piliers sont si solidement construits, que la position de l'instrument ne varie que de très peu. Toute la série des observations de la zone est faite dans la même position de l'instrument, cercle Est.

Le réticule est composé de 11 fils verticaux et 3 horizontaux, dont 2, distants de 9, sont mobiles à l'aide du micromètre dans l'oculaire. Pendant le passage de l'étoile observée on fixait sa position dans le milieu de cet intervalle, presque toujours auprès du fil de milieu vertical. Les distances des fils latéraux au fil du milieu sont à peu près: 6, 10, 10, 13, 20, 40, 40, Les étoiles de comparaison (Anhaltsterne) ont été observées à 8-9 fils, celles de la zone au moins aux 3, le plus souvent aux 4-5 premiers fils. Les passages se notaient par les piqûres d'une aiguille sur le papier de l'appareil enregistreur, où la pendule normale notait aussi les secondes paires. Les étoiles de comparaison ont été observées au commencement et à la fin de chaque zone, à moins que le ciel ne se couvrît pas, et quelquefois on en a observé quelques-unes même dans les intervalles des étoiles de la zone. Le nombre moyen des étoiles de comparaison observées dans chaque zone est égal à 4.5. Pour la détermination de n j'observais ordinairement une ou deux étoiles circompolaires, mais, lorsque je n'y parvenais pas, je déduisais sa valeur par interpolation des zones voisines, ce qui était permis, parceque l'influence de n sur la position des étoiles de la zone équatoriale est presque négligeable. La détermination de l'erreur de collimation n'a été faite que rarement, vu que son action sur les étoiles de la zone et sur les étoiles de comparaison est presque la même.

La position du cercle de division se déterminait pour les étoiles de comparaison par la lecture de deux microscopes, pour celles de la zone d'un seul, mais, s'il y avait du temps, je lisais aussi l'autre. Les différences moyennes des deux lectures ont été calculées dans chaque zone pour réduire les lectures d'un seul microscope à la moyenne de tous les deux. Dans chaque microscope je pointais deux traits successifs; en 1882, dans le but d'accélérer le travail, j'ai commencé à ne lire qu'un seul trait, mais ce n'est que pendant 7 zones que j'ai suivi cette méthode, après quoi je suis revenu à la méthode précédente pour diminuer l'influence des erreurs accidentelles des divisions. La valeur des divisions des microscopes a été déduite des observations de chaque nuit, mais presque toujours pour les groupes des zones voisines les valeurs moyennes ont été employées.

Au mois d'octobre 1883, ayant remarqué que le point de l'équateur changeait quelquefois sensiblement pendant les observations d'une soirée, je fixai un niveau au cercle de l'alidade; ainsi à partir de la zone 141, après l'observation de chaque étoile de comparaison, et quelquefois de celles de la zone, je faisais la lecture de ce niveau; pour les autres étoiles sa position se déduisait par interpolation, après quoi toutes les lectures du cercle se réduisaient à l'inclinaison moyenne de la soirée.

Une série de recherches fut exécutée dans le but de déterminer les erreurs systématiques du cercle, d'où il s'est trouvé que si nous désignons par D le diamètre du cercle passant par les microscopes quand la

Introduction. (7)

lunette est dirigée vers le milieu de la zone, les erreurs des diamètres éloignés de 30° de D atteignent 1".5. Ayant en vue que les déclinaisons des étoiles de comparaison ne différaient pour la plupart plus de 10° de la déclinaison moyenne de la zone, cette différence atteignant pour les cas extrêmes la valeur de 15° seulement, et que constamment on a eu soin que la déclinaison moyenne des étoiles de comparaison dans chaque zone fût presque égale à celle de la zone, on peut s'attendre à ce que les erreurs systématiques des divisions n'influent pas sur la précision des déclinaisons. Quant aux erreurs accidentelles des divisions, il fut déduit du grand nombre de lectures que l'erreur moyenne de la distance de deux traits successifs est = 0.5, et comme on lisait toujours pour chaque étoile au moins deux traits, excepté dans les 7 zones notées ci-dessus, l'erreur probable des déclinaisons due à l'erreur accidentelle des divisions ne surpasse pas 0.17.

Le champ de la lunette est éclairé par une petite lampe placée au-delà d'un des piliers, d'où la lumière, après avoir traversé le pilier et l'axe, est réfléchie vers l'oculaire par un miroir annulaire fixé dans le cube. L'horloge est éclairée par une lampe placée à la distance de 1^m.2 du pilier oriental, laquelle, à l'aide de lentilles et de miroirs concaves, éclaire aussi les illuminateurs des microscopes.

La pendule de Barraud suspendue au pilier à quelques pas de l'instrument servait à marquer la seconde initiale de l'enregistreur et était employée directement pour les observations des étoiles rapprochées du pôle; sa marche est réglée à l'aide du courant électrique par l'horloge normale de Hohwit, installée dans la cave de l'observatoire, où les changements diurnes de la température sont tout à fait insensibles et la variation pendant l'année ne surpasse pas 4° R.; de plus, le pendule à mercure de cette horloge a une compensation barométrique.

Le chronographe est placé à quelques pas hors de la salle méridienne, dans le cabinet de l'astronome, pour qu'il soit dans un local chauffé, mais cela avait ses inconvénients: dans les cas où le ruban de papier enregistreur était retenu par quelque chose, l'astronome, sans le savoir, continuait ses observations, tandis que les passages observés n'étaient pas enregistrés. Pendant les premiers mois du travail cela arrivait assez souvent.

Les distances des fils verticaux furent déterminées plusieurs fois pendant la période des observations, et comme les résultats s'accordaient dans les limites des erreurs accidentelles, on employait leurs moyennes dans les calculs.

La réfraction fut calculée à l'aide des *Tabulae refractionum in usum speculae Pulcovensis congestae, 1870° et contrôlée au moyen d'une table spéciale calculée avec l'argument de la lecture du cercle. Pour la réduction des positions apparentes aux positions moyennes au commencement de sl'année de petite tables furent calculées pour chaque soirée d'observation de 10^{m} à 10^{m} en Asc. dr. et de 1° à 1° en Décl., à l'aide des constantes du Berliner Jahrbuch. D'autres tables, ayant pour intervalles 2° en Décl. et 5^{m} en Asc. dr., furent construites pour la réduction des ascensions droites à l'époque 1875; les réductions des déclinaisons furent faites à l'aide des tables de M. Folie: *Douze tables pour le calcul des réductions stellaires.* Les mêmes tables ont servi au calcul de $\pi t g \delta \sin \alpha$ pour chaque étoile pour l'époque 1875, de même qu'à la construction de tables de Var. séc. en Ascension droite et Déclinaison pour chaque degré de Déclinaison et de 1^{m} à 1^{m} en Asc. dr. —

Il m'a été impossible de faire deux fois tous les calculs; mais vu que les tables se vérifient par les différences et que tous les autres calculs furent soumis aux différents contrôles, j'espère que dans les résultats que j'ai tirés de mes observations le nombre des erreurs de calcul est assez restreint. Quant aux erreurs accidentelles des observations, celle de la déclinaison surpasse sensiblement l'erreur correspondante dans les catalogues d'autres observatoires: Berlin, Albany... Les causes en sont, sans parler des capacités individuelles, d'une part la faiblesse optique de la lunette et l'imperfection des divisions du cercle, d'autre part les défauts de la construction de la salle méridienne cités plus haut.

. Pour évaluer les erreurs accidentelles moyennes des positions déterminées, j'ai pris dans le Zettel-Catalogue les différences des deux premières déterminations de chaque étoile, en tirant 51 étoiles de suite de chaque heure d'Asc. dr., dont 17 se rapportaient aux étoiles ≥8^m, 17 entre 8^m et 9^m et 17 étoiles <9^m; en tout il est fait 1224 comparaisons, d'où il est trouvé:

Grandeur $\ge 8^m$ $8^m - 9^m$ $< 9^m$ Différ. moyenne 0:075 1"37 0:082 1"46 0:094 1"50

En moyenne nous avons 0.084 et 1.45 pour la différence des deux déterminations; ainsi l'erreur moyenne de la moyenne des deux déterminations = 0.042 et 0.73, et l'erreur probable: 0.028 et 0.49.

J'ai déjà dit que les observations, les lectures du cercle, l'enregistrement dans le journal, enfin le pointage — tout était fait par le même observateur; c'est pourquoi l'estimation des grandeurs des étoiles ne pouvait être très exacte: l'observateur, en effet, n'avait pas assez de temps pour cela, et son œil devait passer constamment d'un éclairage à un autre, du champ de la lunette au microscope et puis au papier. Les faibles grandeurs qui réclamaient la diminution de l'éclairage du champ étaient appréciées plus exactement. Ayant comparé 300 de mes estimations avec celles de B.D. dans les différentes heures d'Asc. dr., j'ai trouvé que la différence ne surpassait pas en moyenne o^mo5, mais je ne me permets pas d'attacher une grande importance à cet accord, d'autant plus que, dans le catalogue préliminaire, que je devais consulter à chaque instant pour faire le pointage, les grandeurs des étoiles étaient notées selon B.D. — mon estimation ne pouvait donc être indépendante. —

Une série d'observations a été faite dans le but de déterminer l'équation personnelle dans les observations des passages des étoiles de différentes grandeurs. Dans ce but un châssis avec un réseau métallique qui diminuait l'éclat des étoiles de 1^m s'abaissait devant l'objectif de la lunette; en doublant le réseau l'éclat s'affaiblissait de 2^m. Chaque étoile fut observée à 3 ou 4 fils sans châssis et aux autres avec le châssis baissé, ou vice versa, en changeant l'ordre d'une étoile à l'autre. J'ai déduit qu'en moyenne les étoiles faibles furent enregistrées plus tard, donc leurs ascensions droites sont plus grandes. Dans la table suivante sont donnés les résultats des observations des étoiles de différentes grandeurs:

| | 1 rése | a u | | 2 réseaux | | | | |
|--------------------------------|--------------|----------------------|-------------------------------------|--------------|----------------------|--|--|--|
| Grandeur pleine | Nombre d'ét. | Δt Br. — Fb. | Grandeur pleine | Nombre d'ét. | Δt Br. — Fb. | | | |
| 5 ^m -7 ^m | 12 | -o.o33 | 5 ^m 5 - 6 ^m 5 | 11 | +0.012 | | | |
| 7.5 | 12 | 0.037 | 7 | 20 | -0.046 | | | |
| 8 | 25 | -0.054 | 7.5 | 13 | -0.032 | | | |
| 8.5 | 29 | -0.050 | 8 | 12 | +0.005 | | | |
| | 78 | -0.044 | | 56 | -0.015 | | | |

En moyenne les étoiles faibles sont observées o'o30 plus tard. -

Les positions des étoiles du catalogue furent comparées avec les catalogues des époques éloignées: Bradley, d'Agelet, Lalande, Bessel, Struve, Lamont, Argelander, Poulkova et Schjellerup et aussi avec les catalogues modernes: Göttingen, Romberg et Albany; les dernières comparaisons furent faites dans un but de contrôle, afin de découvrir quelques erreurs ou méprises plus ou moins grossières, toujours possibles dans de pareils amas de chiffres.

Le catalogue de Nicolajew contient 14 étoiles du Catalogue Fondamental, dont les positions peuvent être déduites des zones de la même façon que celles des autres étoiles. La table suivante contient les résultats de ces observations et leurs comparaisons avec le Catalogue Fondamental; les deux premières colonnes contiennent les Nos des catalogues, la 3ème l'époque moyenne des observations de Nicolajew; la 4ème et la 5ème les ascensions droites et déclinaisons de Nicolajew, corrigées pour le mouvement propre adopté dans le Catalogue Fondamental; la 6ème les résultats de la comparaison, enfin la 7ème les Nos des zones d'où les positions de ces étoiles sont tirées.

| N | r. | Ép. | Asc. dr. | Décl. | FN. | | Zone | • |
|------|------|------------|-------------------------------------|-----------------------|------------|---------|----------|------------|
| Nic. | F.C. | Ep. | | Deci. | F.—N. | | Zon | C S |

| 5001 | 281 | 79.6, 79.3 | 19 46 6.26 | +0 41 10.1 | +0.04 +0.5 | 7 38 | 136 1 | 40 |
| 5082 | 287 | 78.o | 20 4 51.27 | -1 11 26.5 | +0.02 -0.5 | 2 3 | 5 | 7 124 |
| 5571 | 311 | 77-4 | 21 59 21.82 | - 0 55 35.0 | -0.02 +0.1 | 8 30 | 31 | 41 |
| 5629 | 317 | 82.4 | 22 15 11.98 | -2 I 0.5 | 0.00 +0.8 | 36 52 | 149 1 | 56 305 306 |
| 1862 | 320 | 81.2 | 28 55.96 | -0 45 41.0 | +0.02 +0.5 | 36 41 | 158 3 | 109 |
| 5825 | 534 | 86.5 | 23 20 31.49 | +0 34 16.4 | 0.00 +0.8 | 65 232 | 541 | |

La différence moyenne se trouve: F.-N. = +0.020 et +0.21.

Si nous admettons que les positions du Catalogue Fondamental sont exactes et que les F.—N. sont les erreurs accidentelles des positions du catalogue de Nicolajew, nous avons pour les erreurs probables de ces positions: ±0.014 et ±0.47.

Dans le catalogue Bradley-Auwers nous trouvons 110 étoiles de notre catalogue (sans compter les étoiles fondamentales). Ayant réduit leurs positions à l'époque 1875.0 à l'aide de la précession du catalogue d'Auwers, nous avons reçu les différences N.—Br. données dans les tables de comparaison des catalogues p. 126. En les affranchissant des mouvements propres donnés dans le même catalogue, nous trouvons en moyenne N.—Br. = +0.047 et -0.48.

Le catalogue Gould-d'Agelet contient 69 étoiles de notre catalogue (les étoiles fondamentales étant toujours exclues); leurs réductions à 1875 ont été calculées, comme on a fait également pour les étoiles des autres catalogues, à l'aide des précessions et var. séc. du catalogue de Nicolajew, et les différences N.—d'A. sont données dans la table p. 127. De ces étoiles 42 ont été observées par Bradley; après avoir corrigé leurs N.—d'A. pour les mouvements propres et en ayant exclu quelques différences anomales provenant peut-être de quelques erreurs ou méprises dans le catalogue de d'Agelet, nous avons trouvé, par 36 étoiles en Ascension droite et par 38 en Déclinaison, les moyennes: (N.—d'A.)_m = +0.053 et -0.85.

Dans l'Histoire Céleste nous avons 1921 observations des étoiles de notre zone; toutes ces observations, corrigées d'après les tables publiées par Argelander dans B. B. VII, furent réduites à l'époque 1800 à l'aide des tables de von Asten et puis à 1875 en employant les données de notre catalogue, comme il

Introduction. (9)

est dit plus haut. Les différences N.—Lal. sont données dans les tables de comparaison. De 1679 étoiles communes 98 se trouvent chez Bradley; ayant corrigé leurs Δ pour le mouv. pr. et exclu quelques différences trop grandes, nous avons trouvé les moyennes de 91 comparaisons en Ascension droite et de 93 en Déclinaison: $(N.—Lal.)_m = +0.116$ et -2.27.

Ayant groupé les différences N.—Lal. pour chaque zone de Lalande séparément, et en ayant exclu celles qui paraissaient trop grandes, nous avons trouvé les N.—L. moyennes qui sont réunies dans la table suivante:

| | Date | | Page | | sc. d | | | Ét. | N.—1.a | 1. |

Les zones de Bessel contiennent 3897 observations de 3282 étoiles de notre catalogue. Corrigées selon les tables du 37° vol. des Observations de Königsberg toutes ces observations furent réduites à 1825 à l'aide des tables données dans le même volume. Parmi ces étoiles nous trouvons 95 étoiles de Bradley; ayant corrigé leurs N.—BZ. pour le mouvement propre etc., nous avons:

 $(N.-BZ.)_m = -0.078$ en moyenne de 89 étoiles, et +0.35 en moyenne de 93 étoiles.

Les différences moyennes pour chaque zone de Bessel, obtenues comme cela a été fait pour les N.-Lal., sont données dans la table suivante:

| | Date | | Zone B. | | r. 1825 jusqu'à | Ét. | N.—BZ. |

Introduction. (II)

Le catalogue de Struve » Positiones mediae, 1830 « contient 107 étoiles de notre zone; parmi ces étoiles 11 se trouvent chez Bradley, lesquelles, affranchies des mouvements propres, donnent en moyenne: $(N.-Str.)_m = +0.03$ et -1.3. Dans la comparaison, on a appliqué les » correctiones ultimae « de Struve.

Dans le catalogue » Münchener Sternverzeichniss I« nous trouvons 4098 étoiles de notre catalogue; les différences N.—Lam. sont réunies dans la table p. 158 et suiv.. En groupant les N.—L. selon l'Asc. dr., ayant exclu préalablement les trop grandes différences provenant soit du mouvement propre, soit de quelques erreurs anomales, nous trouvons en moyenne pour $(N.—L.)_a$ une grandeur presque constante = -0.08, et pour $(N.—L.)_b$:

Dans le catalogue d'Argelander (B. B. VI) se trouvent 532 étoiles de la zone, dont 9 seulement se rencontrent chez Bradley. Ayant exclu les différences anomales, nous avons trouvé, à l'aide de 486 étoiles, les moyennes: (N.-Arg.)_m = -0.075 et -1.44.

Le catalogue de Poulkova pour 1855 (Obs. de Poulk. Vol. VIII) contient 230 étoiles de notre zone; 107 d'entre elles se trouvent chez Bradley et leurs différences N.—P., affranchies des mouv. pr., donnent en moyenne +0.035 et -0.18.

Dans le catalogue de Schjellerup (10000 Positioner af teleskopiske Fixstjerner) on trouve 1098 étoiles de la zone de Nicolajew. Les différences moyennes pour les diverses heures d'Asc. dr. sont réunies dans la table suivante:

| | ** | N.—S. | Moyennes | Asc. dr. | ** | NS. | Moyennes |
|---------------------------------|----|--------------|---------------|----------------------------------|-----|---------------|---------------|
| 0 ^h , 1 ^h | 57 | -0.002 -0.88 | | 14 ^h ,15 ^h | 74 | +0.030 -1.45) | - |
| 2, 3 | 73 | -0.009 -0.78 | | 16, 17 | 94 | +0.030 -1.29 | +0.041 -1.35 |
| 4, 5 | 81 | +0.037 -0.70 | +0.015 -0.82 | 18, 19 | 110 | +0.036 -1.28 | (508 étoiles) |
| 6, 7 | 94 | +0.048 -0.86 | (487 étoiles) | 20, 21 | 114 | +0.062 -1.25 | (500 etolies) |
| 8, 9 | 63 | +0.053 -1.10 | (40) ctones) | 22, 23 | 116 | +0.045 -1.50) | |
| 10, 11 | 59 | -0.034 -0.57 | | | | | |
| 12, 13 | 60 | +o.009 -o.87 | 1 | | | | |

Parmi ces étoiles il y en a 35 qui se trouvent chez Bradley; leurs différences corrigées pour le mouv. pr. sont en moyenne: +0.06 et -1.0.

Les catalogues modernes de Romberg (Poulkova), Albany et Göttingen (Copeland-Börgen), ayant pour époque 1875.0, furent comparés immédiatement avec le nôtre. Les nombres des étoiles communes sont respectivement 190, 673 et 3169. Les différences N.—R., corrigées pour le m. pr. d'après Romberg, donnent en moyenne de 188 étoiles —0.03 et —0.41. Les N.—Alb., les étoiles avec le mouvement propre très manifesté étant exclues, donnent en moyenne de 656 étoiles —0.065 et —0.74. Enfin la comparaison avec le catalogue de Göttingen donne en moyenne (N.—G.)3 = —0.1; quant au (N.—G.)3 il semble que cette différence ne reste pas constante pour toute la série: nous trouvons

Les comparaisons avec les catalogues des époques plus ou moins éloignées ont servi à déterminer les mouvements propres des étoiles dans les cas où un mouvement se confirmait par plusieurs comparaisons et n'était pas inférieur à o. 1 par an, approximativement. Dans un but de contrôle, nous avons consulté aussi les comparaisons avec les catalogues modernes, mais ces comparaisons n'ont été introduites dans le calcul que quand la distance des époques n'était pas inférieure à 10 ans. —

Dans la liste des mouvements propres p. 122 nous avons adopté pour les étoiles de Bradley, les valeurs données dans le catalogue d'Auwers, à l'exception de quelques étoiles dont les observations chez Bradley sont incomplètes ou incertaines; pour celles-ci le mouvement propre a été calculé indépendamment de même que pour toutes les autres. Prenant en considération l'exactitude relative des différents catalogues, y compris le nôtre, et la moyenne Δ Ép. pour chacun d'eux, nous avons attribué aux différentes valeurs du m. pr., reçues à l'aide de différentes autorités, les poids suivants:

| Nombre d'observ. = | I | 2 | 3-4 | >4 | Nombre d'observ. = | I | 2 | 3-4 | >4 |
|--------------------|---|---|-----|----|--------------------|------|-----|-----|-----|
| Bradley | 4 | 6 | 8 | 10 | B.B.; B.B.* | 2; 3 | 2;3 | 3;4 | 3;4 |
| d'Agelet | 2 | 3 | 4 | 4 | Poulkova | 3 | 4 | 5 | 5 |
| Lalande | 3 | 4 | 6 | 6 | Schjellerup | 1 | 2 | 2 | 2 |
| Bess. Zones | 3 | 4 | 6 | 6 | Göttingen | I | 1 | 2 | 2 |
| Struve | 4 | 6 | 8 | 8 | Romberg | | | 2 | |
| Lamont | 2 | 3 | 4 | 4 | Albany | | | 2 | |

Le Registre des zones qui suit cette Introduction contient: 1° le Nr. de la zone, 2° la date, 3° l'époque, 4° le temps sidéral du commencement et de la fin des observations, 5° le nombre des étoiles observées: P.— ét. polaires, F.— ét. fondamentales, Z.— ét. de la zone, et 6° les différentes remarques concernant les observations de la soirée et la qualité des images; en cas d'images tranquilles il n'est rien dit.

La disposition du Catalogue ne diffère pas de celle qui a été adoptée dans les sections publiées plus tôt; il ne nous reste qu'à ajouter quelques remarques. Les grandeurs données sont les moyennes des estimations inscrites dans le journal, et, comme nous l'avons remarqué plus haut, leur précision doit être assez médiocre; quant aux étoiles brillantes, jusqu'à 7^m, leurs grandeurs, pour la plupart, sont copiées d'après B.D.

Les ascensions droites et les déclinaisons sont les moyennes des résultats obtenus dans les différentes zones; en cas d'une trop grande déviation de quelque détermination, elle n'a été rejetée que quand quelque méprise dans la lecture était presque évidente, ou quand dans le journal cette observation était notée comme douteuse.

Dans la colonne ȃp.« deux nombres sont donnés (le premier correspondant à l'ascension droite) quand l'une ou l'autre coordonnée ne fut pas observée dans quelque zone, ou quand l'observation a été rejetée; dans le premier cas la lettre α ou δ placée après le numéro de la zone indique laquelle des coordonnées fut déterminée. Un asterisque (*) placé à côté de l'époque indique que le mouvement propre de cette étoile est donné dans la liste p. 122. —

Le tableau détaillé des comparaisons avec les autres catalogues qui se trouve à la suite du présent Catalogue, p. 125—195, étant en dehors des limites que la Société s'est proposées pour la publication de son catalogue, est offert aux astronomes de la part de l'observatoire de Nicolajew.

^{*} Quoique la zone 295 ait été notée comme manquée, les corrections instrumentales de ce soir furent déduites, par interpolation, dans le but de voir à quel point on pourrait compter sur leur exactitude, mais plus tard, par méprise, les résultats de cette zone furent placés de pair avec les autres; heureusement ils n'en diffèrent pas sensiblement et leur influence sur les positions du catalogue est presque nulle.

Liste des mouvements propres annuels

des étoiles de la zone -2° à $+1^{\circ}$.

Les étoiles dont les mouvements propres ont été calculés par J. Bauschinger (Neue Ann. d. Münch. Sternw. Bd. II) sont marquées par un asterisque (*) auprès du Nr.; les résultats de M. Bauschinger se trouvent au bas de la page.

Pour les étoiles de Bradley les mouvements propres sont extraits de »Neue Reduction...« excepté les étoiles dont les observations de Bradley sont incomplètes; en ce cas le Nr. de Br. est mis en parenthèses.

¹ Selon les comparaisons avec Lal., B.Z., Str., M., P. et R., l'observation unique de Bradley en asc. dr. exige une correction de -1^s, après laquelle le m. pr. du Cat. Br. (+0.0043) deviendrait +0.0132.

Le Cat. Br. donne le m. pr. -0.0060, mais la première des deux observations discordantes de Bradley semble exiger une correction de -1 (m. pr. corrigé: -0.0015).

Nicolajew — Lalande.

Pour complèter les dates à employet dans une détermination des corrections des différentes zones de Lalande, on a ajouté à la comparaison des positions tirées des observations de Nicolajew, les différences Cat. fond. 1875.0 — Lal. pour les étoiles du Catalogue fondamental qui se trouvent entre les limites de la zone de Nicolajew.

Comme dans la comparaison des zones de Lalande, on a ajouté dans cette comparaison des zones de Bessel aux différences fournies par le catalogue de Nicolajew, les différences brutes du Catalogue fondamental pour 1875.

Nicolajew — Struve, Posit. Med.

¹ Les points observés ne sont pas identiques dans les deux catalogues.

Nicolajew — Lamont.

Dans la colonne AÉp. deux nombres sont donnés, quand, vu le mouvement propre considérable, leur différence n'est pas négligeable.

Rectifications de la Bonner Durchmusterung.

(Additions aux rectifications du Catalogue, B.B. III, indiquées pour les zones -1°, -0°, +0°, +1° dans les vol. III --VIII des Obs. de Bonn.)

```
Ajouter K pour les numéros —1° 125 276 799 1464 1750 3006 3437 3607 3831
—0° 35 1703 1817 1886 2415 3173 4082
+0° 651 671 781 1278 1910 2658 3124 4148 4948
+1° 2847 3816

ajouter L: —1° 3051, —0° 2044
ajouter B: +0° 4671

Rayer K: +0° 4660, +1° 286, +1° 2296

Remplacer L par K: —0° 2710; +0° 2339, 2340, 3993
K par L: —0° 2924; +0° 1953, 4495, 4496, 4508
```

K par B: +0° 4449, 4542

Quant à l'étoile -0° 615 mentionnée Intr. p. (5), les originaux de B. D., obligeamment examinés sur notre demande par M. Deichmüller, montrent que la position reste sur deux observations bien concordantes, 1853 Janv. 14 et 27; 1853 Déc. 1 l'étoile manque dans la zone passant sur sa place. Peut-être cette étoile est variable; elle a été invisible au cercle méridien de Nicolajew dans les zones: 85, 87, 358, 364, 402, 409, 410, 416 et 557.

Dans la colonne ȃp.« il faut ajouter un astérisque aux nombres donnés pour les numéros 2800, 3220, 3884, 3916, 4027, 4033, 5874.

Pour les étoiles suivantes les désignations données dans la colonne »B. D.« doivent être mises entre parenthèse, ces étoiles ne faisant pas partie du programme d'observation proposé par la Gesellschaft:

Cat. Nic. Nr. 323 406 606 675 733 736 758 1215 839 1185 1186 1311 1359 1398 1489 1491 1494 1597 1598 1728 1729 1742 1967 2115 2152 2169 2287 2405 2413 2470 2478 2586 2603 2811 2837 2853 2952 3081 3277 3287 3315 3385 3518 3528 3974 4058 4173 4241 4306 4335 4356 4410 4460 4515 4545 4615 4647 4695 4744 4748 4777 4785 4815 4904 4910 4929 4965 4994 5021 5215 5247 5250 5379 5435 5545 5680 5885.

Si pour l'observation des étoiles de la zone -2° (B.B. VIII) plus faibles que 9.0 on limite de même le programme à la répétition des observations L, K, S, il faut encore mettre entre parenthèse les désignations de la colonne »B. D. « pour les numéros du catalogue: 331 607 714 943 1794 1948 2314 3305 3633 3774 4009 4063 4093 4124 4133 4342 4389 4519 4562 4679 4716 4836 4865 4972 5034 5043 5077 5129 5141 5181 5239 5243 5291 5311 5353 5373 5452 5474 5476 5478 5579 5599 5693 5844.

Le premier de ces groupes contient dix étoiles pour lesquelles le signe de parenthèse manque simplement par méprise (en trois cas, par suite d'une erreur d'impression dans le vol. III des Obs. de Bonn dont la rectification n'a été remarquée qu'après l'impression du présent catalogue). Les autres 68 étoiles de ce groupe sont situées près de la limite australe de la zone et, comme toutes les 44 étoiles du second groupe, furent insérées dans le catalogue préliminaire dans le but d'une extension du programme d'observation vers cette limite qui avait été recommandée à l'auteur par feu M. Schönfeld.
